Reporting guidelines in other research fields

The EQUATOR Steering Group has broadened the remit of reporting guidelines included on our website and created a special page for reporting guidelines from other research fields.

The EQUATOR team does not have capacity nor expertise for comprehensive searches of literature from all research fields and this additional special page will not represent a comprehensive collection of all available guidelines as we try to achieve with the guidelines closely relating to the reporting health research.

Limitations of the EQUATOR reporting guideline collection

Although we run regular comprehensive searches across the main databases indexing health-related literature it is possible we missed some published guidelines. This might have happened particularly in the case of reporting guidelines for specific diseases or conditions.

There are also guidelines being developed with the aim of standardising terminology in health research reporting. These are not currently comprehensively included on the EQUATOR website but we are planning to put more emphasis on identification of those guidelines and add them to the EQUATOR Library in the future.

We would like to acknowledge the support of many journals who agreed to publish some reporting guidelines as identical multiple publications, which requires a great effort and collaboration, to support wider dissemination of the guidelines. These guidelines include CONSORT, STRICTA, ORION, STROBE, STREGA, REMARK, STARD, PRISMA, SQUIRE, and some of the guidelines for specific conditions. Currently, the EQUATOR website lists only references to journals that published the guideline first (not later republications). The EQUATOR Network and guideline groups greatly appreciate journals' support and want to encourage multiple publications of new guidelines in the future.
