

Lack of time (researchers)
Researchers don't think it is ~~reporting~~ ^{important}.

Lack of protocol.

Stop involving people initially involved.

Pressures to publish & cut corners to meet
Lack of reporting skills. ^{deadlines/} _{bibliometrics.}

Space limitations in journals.

Publisher control of material.

Recognising the role of the librarian = timing of involvement.

Selective reporting to get published.

Number of people in the team.

Lack of knowledge "What is a Systematic review?"

Systematic review vs systematic search.

Awareness of the impact of poor searching/reporting.

Librarians need to be assertive & take responsibility for writing up search methodology.

100% of the time the research is poor

We need to train medical students about the rigours required in research.

Poor peer reviewing.

- Not reproducible : inaccurate repres. of results
no update possible
- cannot trust it:
- can be harmful ~~to~~
- selective reporting → bias [Tamiflu]
- poor reporting of certain types of report → prejudice
- (mixed methods) -
- miss grey lit
- waisting : time, resources
